

Sulphur Recovery

Petrochemical Industry

Oil refineries, the chemical industry and the chemical waste processing industry demand high performance refractory products. Gouda Refractories has the products to match the strict specifications for all critical equipment.

Gouda Refractories successfully designs, manufactures and supplies high grade refractory linings for all equipment within a sulphur recovery train – from main burner and reaction furnace burner to stack.

Gouda Refractories has been and is involved in most of the recent large scale sour gas treatment projects in the Middle East and North Asia but of course also outside these regions.

Being market leader in refractory linings for sulphur recovery units, Gouda Refractories endeavors to keep on par with and ahead of market requirements: the growing scale and accompanying technical constraints.

This has for example resulted in the development of the LP 85 L and LP 90 L brick: dense, low porosity, high aluminium oxide bricks with improved thermal conductivity behavior which results in an optimized lining design under severe process conditions.
